Art Unit: 2817

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It has not been adequately explained how the negative reactance component values are incorporated into existing reactive components that are not identified as negative since negative reactance is normally generated by active circuits.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dent et al. disclose a Chireix type amplifier in fig. 7 for instance including active switching amplifiers 312,314 and output resonator 550 connected via combiner 320 that may be read as an impedance converter; however, Dent et al. do not address incorporating negative reactance values required into other existing reactive components.
